**Section Title: Appendix - Sections**  
**Document Title: Pratt & Whitney Materials Control Laboratory Qualified Commercial Laboratory List**

---

**WARNING**

This document is the property of United Technologies Corporation (UTC). You may not possess, use, copy or disclose this document or any information in it, for any purpose, including without limitation to design, manufacture, or repair parts, or obtain FAA or other government approval to do so, without UTC's express written permission. Neither receipt nor possession of this document alone, from any source, constitutes such permission. Possession, use, copying or disclosure by anyone without UTC's express written permission is not authorized and may result in criminal and/or civil liability.

**APPLIES TO: Pratt & Whitney Group**

**1. PURPOSE AND SCOPE:**

This Appendix provides a listing of Commercial Laboratories Qualified by the Pratt & Whitney Group, Materials Control Laboratory (a.k.a. Quality & Standards Laboratory), and identifies the Type of Testing that each listed Laboratory is qualified for.

**2. OWNERSHIP AND APPROVAL:**

The Chief, Quality & Standards Laboratories (Q&SL), PW South & Supervisor Supplier Metallurgical Development PW North are the owners of this procedure. All revisions to this procedure must be approved by the owners and balloted in accordance with MCL Manual Section C-5.

**3. DEFINITIONS:**

- 3.1 **Pratt & Whitney Group** – encompasses both Pratt & Whitney Canada (PW North) and Pratt & Whitney US (PW South).
- 3.2 **Semi-quantitative Spectrographic Analysis** – The Determination of a material's chemistry to detect the presence of the alloying elements to a degree by which a positive identification can be made as to the alloy type, as well as the ability to distinguish between similar alloys.
- 3.3 **Quantitative Spectrographic Analysis** – P&W defines quantitative spectrographic analysis as “utilization of a least squares calibration curve”.
- 3.4 **Wet Chemical Analysis** – P&W defines wet chemical analysis as “gravimetric or titrametric analysis”.

3.5 **Optical Emission Spectroscopy (OES)** – OES is defined as testing which utilizes “ICP (Inductively Coupled Plasma), DCP (Direct Current Plasma) and DR (Direct Reader)”.

**4. PROCEDURE:**

- 4.1 The commercial laboratories listed in [Table I](#) and [Table II](#) have been reviewed by Pratt & Whitney-Materials Group Control Laboratory (P&W-MCL) and found capable of performing the types of tests for which they are listed. This list shall not be construed as a guarantee by P&W-MCL that testing will be done properly, nor does it relieve the supplier from his contractual obligation to deliver conforming materials and parts based on accurate and valid test results.
- 4.2 The listing of a laboratory in the applicable Tables signifies only that, at the time of review, the laboratory was found capable of performing the tests for which it is listed. The laboratory is not relieved of responsibility for continued conformance as determined by calibrations and operational checks of testing and measuring equipment.
- 4.3 This list shall not be reproduced without written permission from P&W-MCL and should not be considered completely up-to-date at any time, as deletions and additions may be made by P&W-MCL.
- 4.4 Laboratories listed in [Table I](#) are required to comply with MCL Manual Section F-23, “Test and Calibration Requirements for Commercial and In-House Laboratories”, when that section is specified on orders from their customers. Failure to comply with MCL-Manual Section F-23 will disqualify the laboratory as a testing source for materials or parts.
- 4.4.1 Laboratories listed in [Table I](#) shall forward test specimens together with the applicable test results to P&W-MCL for correlation testing on a yearly basis as outlined in MCL Manual Section F-23. MCL Form 404 (See MCL Manual Section F-23) will be submitted with all correlation testing packages.
- 4.5 Laboratories listed in [Table II](#) are required to comply with MCL Manual Section FC-23, “Test and Calibration Requirements for Commercial and In-House Laboratories”, when that section is specified on orders from their customers. Failure to comply with MCL-Manual Section FC-23 will disqualify the laboratory as a testing source for materials or parts.
- 4.6 At the discretion of P&W-MCL, any laboratory may be removed from this listing when no longer deemed qualified or when the services are no longer required by P&W or its subcontractors.

4.7 The following laboratories may be used for qualitative analysis using mass spectrograph for information only and will not be surveyed:

- Accu-Labs Research, Inc.  
11485 West 48<sup>th</sup> Avenue  
Wheat Ridge, CO 80033
- Commercial Testing & Engineering Company  
Instrumental Analysis Division  
14335 West 44<sup>th</sup> Avenue  
Golden, CO 80401
- Ledoux & Company  
359 Alfred Avenue  
Teaneck, NJ 07666
- Shiva Technologies Inc.  
6707 Brooklawn Parkway  
Syracuse, NY 13211

5. **FORMS:**

- MCL Form 404

6. **REFERENCES:**

- MCL Manual Section F-23
- MCL Manual Section FC-23
- MCL Manual Section S-8

**7. NATURE OF CHANGE FOR THIS ISSUE:**

- Table 1 updated:
  - Updated SQE names for Commercial Laboratories:
    - Advanced Plastic & Material Testing, New York
    - IMR Singapore Pte. Ltd., Singapore
    - IMR Test Labs, New York
    - UL Verification Service Inc., Connecticut
  - Added Element Materials Technology, 1200 Westinghouse Blvd, Suite A, Charlotte NC – Codes 1 & 2
  - Changed SQE name Santangelo to Meehan for: IMR Labs. Lancing NY; Advanced Plastics & Materials Testing Ithaca, NY
  - Reinstatement Martin Metallurgical, Stuart, FL – Code 5
  - Added to note 7 Letter "S" to code 19(XRD) designates qualification for residual stress analysis
  - Updated typo in column 7i. It lists "Commerical" instead of "Commercial"
  - Added Element Materials Technology, Charlotte, NC with codes 1 & 2
- Table 2 updated:
  - Added to note 7 Letter "S" to code 19(XRD) designates qualification for residual stress analysis

**Notes:**

1. P&W defines semi-quantitative spectrographic analysis as "The Determination of a material's chemistry to detect the presence of the alloying elements to a degree by which a positive identification can be made as to the alloy type, as well as the ability to distinguish between similar alloys".
2. P&W defines wet chemical analysis as "gravimetric or titrimetric analysis".
3. ICP, DCP, Direct Reader.
4. P&W defines quantitative analysis as "utilization of a least squares calibration curve".
5. Code numbers with an element suffix (e.g.; 17Pb) designate qualification for analysis of that element on cast turbine airfoil alloys by the specified test method.
6. The letter "C" suffix to Code 17 (Atomic Absorption) also designates qualification for residual cerrobend analysis in hollow core blades and vanes.
7. The letter "R" suffix to Code 19 (XRD) also designates qualification for retained austenite. Letter "S" to Code 19 (XRD) designates qualification for residual stress analysis.
8. Qualification for Codes 15 and 16 is not required for simple identification tests.
9. Codes C30, C31 and C32 are formerly PWC Codes 30, 31, and 32, respectively
